PROFESSIONAL SUMMARY

Fullstack developer who shipped 4 enterprise RegTech products in under 18 months, automating SEBI regulatory reporting, PIT/insider trading surveillance, and multi-source trade reconciliation for BFSI clients. Architected and delivered end-to-end across Python, FastAPI, React, and PostgreSQL - architecture through deployment on Docker and Azure DevOps.

SKILLS

Languages: Python • TypeScript • JavaScript • SQL • Java | **Backend:** FastAPI • Node.js • PostgreSQL • REST API • Microservices | **Frontend:** React • Next.js • Tailwind CSS • Expo | **DevOps:** Docker • Azure DevOps • CI/CD • Git • GitHub Actions | **Compliance:** SEBI • RegTech • PIT • Trade Surveillance • GRC • ECAS/BENPOS • Maker-Checker • RBAC • Audit Trail

PROFESSIONAL EXPERIENCE

Software Developer

Infomatics Services Pvt. Ltd. • Mumbai | June 2025 – Present

Novus Comply

- Engineered pre-clearance engine with multi-tier approval workflows and automated ECAS/BENPOS/KFin/CAMS reconciliation across 4 data sources - flagging 100% of restricted trades that previously required manual cross-checking.
- Enforced grey-list/UPSI restrictions and defaulter tracking with role-based access control (RBAC) and bcrypt auth across all user tiers.

Compulse

- Co-developed compliance platform automating 67+ SEBI report types across 43 maker-checker workflows and 32+ automated mail triggers - currently in UAT with a leading financial institution.

CAS Parser

- Developed Python desktop app (Tauri + PyInstaller) extracting Demat holdings, mutual fund data, and transactions from unstructured CDSL PDF statements using PyMuPDF, tabula-py, and Pandas.
- Processing 500+ CDSL statements/month with 98% extraction accuracy - eliminated 10+ hours/week of manual compliance data entry for the ops team.

Employee Leave Management System

- Delivered company-wide leave management handling 50+ employees with auto-escalation workflows, real-time balance dashboards, and configurable approval rules - reduced HR processing time by 60%.

INDEPENDENT PROJECTS

[Biometric Attendance & Salary System](#)

Personal Project • attendance-sigma-one.vercel.app

- Deployed biometric attendance system for 8 hospital employees - eliminating manual Excel timesheets and cutting monthly payroll processing from 2+ hours to under 30 minutes, including automatic payslip generation.
- ZKTeco SDK syncs attendance in real time; salary engine handles 30-day cycles, PL accrual, and overtime/deduction logic. Developed web (FastAPI + React) and mobile (Expo, Android APK via EAS) end to end.

[NSA Sports Platform](#)

Personal Project • nsasports.co.in

- Role-based platform where players register individually or under a club; admin reviews documents and approves/rejects with automated reason emails, fully configurable via CMS without code changes.

EDUCATION

BSc Information Technology | Bhavan's College • Mumbai University | 2021 – 2024
