Nuzhat Khan

Python Developer | Backend Engineer (FastAPI, PostgreSQL) | RegTech and BFSI

Mumbai, India (open to remote) | knuzhat136@gmail.com
linkedin.com/in/nuzhat-khan-dev | github.com/Naazkn13 | nuzhat-portfolio-alpha.vercel.app

PROFESSIONAL SUMMARY

Python backend developer with 14 months of enterprise product engineering in regulated BFSI software. Shipped 4 production platforms (SEBI compliance reporting, trade pre-clearance, financial document extraction, HR operations) using FastAPI, PostgreSQL, Docker and Azure DevOps. Also built a hardware-integrated payroll system for an eye hospital, an algorithmic trading system with 37 automated tests, and an AI semantic search engine (CLIP, Qdrant). Available immediately.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript
Backend and APIs: FastAPI, REST APIs, Pydantic, SQLAlchemy, AsyncIO, PyTest, JWT, RBAC
Databases: PostgreSQL, Supabase, SQLite, Qdrant (vector database)
Data and Documents: Pandas, NumPy, PyMuPDF, Tabula-py, ReportLab (PDF generation), Excel
DevOps: Docker, Azure DevOps (CI/CD), GitHub Actions, Git, Linux, Postman
Frontend (working knowledge): React, Next.js, Tailwind CSS, Expo (React Native)
Domain: SEBI regulatory reporting, PIT/UPSI compliance, maker-checker workflows, audit logging
AI-Assisted Development: Claude, GPT, OpenCode, CodeRabbit (automated code review)

PROFESSIONAL EXPERIENCE

Software Developer, Infomatics Services Pvt. Ltd., Mumbai | Jun 2025 – Jul 2026

Novus Comply and Novus UPSI: trade pre-clearance and UPSI governance

- Built a multi-tier trade pre-clearance engine that reconciles four data feeds (ECAS, BENPOS, KFin, CAMS) and applies SEBI PIT restricted-list and grey-list checks to every request.
- Implemented RBAC, bcrypt authentication, Fernet-encrypted UPSI fields and tamper-evident SHA-256 audit logging.
- Designed async FastAPI endpoints over indexed PostgreSQL queries for sub-second compliance audit queues.

Compulse: SEBI regulatory reporting platform

- Co-developed a platform automating 67+ SEBI report types across 43 maker-checker workflow stages with 32+ automated emails; reached institutional client UAT.
- Built Pydantic validation schemas across heterogeneous data sources, eliminating cross-department submission errors.

CAS Statement Parser: client-deployed desktop tool

- Built a Python desktop app (PyMuPDF, Tabula-py, Pandas, Tauri, PyInstaller) that extracts Demat holdings and transactions from unstructured CDSL statements at 98% accuracy on 500+ statements per month, saving 10+ hours per week.

Employee Operations Portal

- Delivered a full-stack portal for 50+ employees with real-time balance dashboards, configurable approval workflows and escalation rules, cutting HR processing overhead by 60%.
- Containerised services with Docker and shipped through Azure DevOps CI/CD pipelines to client UAT.

PROJECTS

Biometric Attendance and Payroll System | FastAPI, React, Supabase, Expo, ZKTeco SDK | attendance-sigma-one.vercel.app

- Synced biometric punch events in real time from ZKTeco devices (ADMS protocol) into a FastAPI backend, replacing manual Excel logging at an eye hospital (12+ staff).
- Automated 30-day payroll cycles, paid-leave accrual, overtime, deductions and PDF payslips, with an Expo Android check-in app. Cut monthly payroll processing from 2+ hours to under 30 minutes.

Algorithmic Trading System (Project Phoenix) | Python, pandas, SQLAlchemy, SQLite, Pydantic, pytest

- Built a trading system on the Angel One SmartAPI with risk controls (position sizing, daily kill-switch, trailing stops) and a persisted trade journal.
- Wrote 37 pytest tests across 11 files covering risk sizing, trailing stops and session filters. Private repository; code walkthrough available on request.

Hospital SOP and Operations Portal | Next.js, Python (ReportLab), Supabase

- Built for an eye hospital: a Next.js portal with role-based access, backed by a Python pipeline that generates 40+ SOP documents across 15 categories as PDFs.

NSA Sports Platform | Next.js, Express, Supabase, Razorpay, Tesseract.js | nsasports.co.in

- Built a live sports operations platform managing 50+ players with multi-tier registration, club affiliations, OTP login, Razorpay payments and OCR-based document verification.
- Added role-based admin dashboards with approval workflows and email notifications, cutting manual review turnaround by 70%.

FashionGallery: Multimodal Semantic Search | Python, FastAPI, CLIP, Qdrant, Docker | github.com/Naazkn13/FashionGallery

- Built image and text search using CLIP embeddings indexed in Qdrant (tuned HNSW), served through async FastAPI endpoints with Docker Compose.

EDUCATION

BSc Information Technology, Bhavan's College, Mumbai University | 2021 – 2024

CERTIFICATIONS

Advanced Program in Java Full Stack Development, DVOC Institute (Skill India / NSDC) | Dec 2025
